

10th Annual Conference on the Science of Dissemination and Implementation in Health

Co-hosted by the National Institutes of Health
and AcademyHealth

The Theme Song

David Chambers, DPhil, National Cancer Institute, NIH

A child's path, an illness blocks,
Cancer causes family shock,
But science has a cure.
Though trial results look promising,
With no access, it's worth nothing,
It's this we can't endure.

A decade of progress moves us on,
D&I science has come along,
Celebrate increase in our field,
But we've still so far to go...

Sometimes we err when we do too much,
Adverse events can impact us,
De-implementation has a role.
What was terminal becomes chronic,
Disease management is now the trick,
Integrated care.

Ten years more on the journey marked,
Drive to improve care's the spark,
The crowd alight 1200 strong,
But still so far to go...

An era where disparities should end,
Mechanisms will tell us the cost curves we can
bend,
Where optimal care becomes standard for all,
Till this we cannot rest

When suicide can be pre-empted,
Depression care should be attempted,
We can implement for all.
And heart disease can be avoided,
Hypertension null and voided,
Precision medicine?

Ten years marked since the first of these,
Population health remains the key,
So much done and more to come,
We'll remain on the path

THANK YOU!
